

Dear Madam/Sir,

I am writing to apply for the role of Senior/Lead Data Scientist position at Tiger Analytics. I am extremely analytical & data-oriented with a good understanding of business, which makes me well-suited for this role.

I started my career as a database developer & within few years I was working as a database architect. During my corporate years, I have worked on different technologies such as SQL, PLSQL, Business Intelligence Reporting, R, and Python with companies like 3i InfoTech, ACS-Xerox & Wipro technologies, across varied domains like banking, retail, supply chain etc. and varied geographies like USA, Australia & India.

Before moving to Data Science & Machine Learning domain, I got my hands dirty in the start-up world where I experienced how businesses are run, and the challenges they face on sales, operations and team management front.

Since the last 5 years, I have been working as a Data Science Trainer & Consultant. I have trained candidates on Data Science & Machine Learning covering R, Python, Statistics, SQL, Deep Learning, and Tableau, building Supervised & Unsupervised Learning models - Regression, Classification, Clustering, and Natural Language Processing. In parallel to training, I have also undertaken few data science consulting assignments around data cleaning, data analysis, and building reports for the upper management. I have also worked on an NLP project for a Silicon Valley based coaching & mentoring company, in which I did an extensive analysis on dialogues between life-coaches and clients.

I have a passion for data & like exploring it for hidden patterns & getting actionable insights from it. I think most of the business problems can be well understood & solved through data. So I am looking for an opportunity where I can build innovative & scalable data solutions for businesses using the skills I have garnered so far.

I would like to thank you for taking the time to review my application and look forward to hearing from you.

Sincerely,

Nitin Monga
